

Access Assignment & Governance Enablement

Overview

The **Access Assignment & Governance Enablement** phase focuses on implementing secure role-based access management within ServiceNow. This phase ensures that users receive appropriate permissions according to their responsibilities.

The Project Manager (**Alice**) is assigned roles that provide complete access to project and task management activities. The Team Member (**Bob**) receives restricted permissions that allow access only to assigned tasks.

By assigning appropriate roles and validating permissions through user impersonation, the system ensures secure access, proper governance, and compliance with least-privilege security principles.

Story: Assign Roles to Alice (Project Manager)

Objective

The objective of this activity is to assign the required roles to **Alice**, the Project Manager, enabling her to manage projects and tasks within the ServiceNow application.

Alice requires full access to:

- Project Table records
 - Task Table 2 records
 - Project creation and management
 - Task assignment and monitoring
 - Workflow approvals
-

Procedure

Step 1: Navigate to Users

1. Open **ServiceNow**.
2. Navigate to:

All → Search "Users"

3. Select the **Users** module under User Administration.

The Users list displays all available users in the system.

Step 2: Open Alice's User Profile

Search for and select:

User Name: Alice

Open Alice's user record to modify role assignments.

Step 3: Edit User Roles

Click the **Edit** button under the Roles section.

Assign the following role:

Role	Purpose
Project Manager Role	Provides project management permissions
Click Save .	

Step 4: Add Table Roles

Click **Edit** again and assign the following table-specific roles:

Role	Purpose
u_project_table role	Provides access to Project Table
u_task_table role	Provides access to Task Table 2

Click **Save** and update the user record.

Assigned Roles for Alice

After configuration, Alice has the following roles:

Role	Access Level
Project Manager Role	Full project management access
u_project_table role	Full access to Project Table
u_task_table role	Full access to Task Table 2

Access Permissions for Alice

The assigned roles allow Alice to:

- ☒ Create project records
- ☒ View all projects
- ☒ Update project information
- ☒ Create and assign tasks
- ☒ Update task records
- ☒ Monitor project progress
- ☒ Approve completed tasks

Validation

To confirm that permissions are correctly applied:

1. Use **Impersonate User** functionality.
2. Select Alice.
3. Navigate to Project and Task modules.

4. Verify that Alice can access and manage required records.

Expected Outcome

After completing this activity:

- Alice is successfully assigned Project Manager permissions.
- Alice has complete access to project and task records.
- Role-based governance is implemented.
- Access permissions are aligned with business responsibilities.

Security Benefits

Role assignment for Alice provides:

- Controlled access management.
- Clear separation of responsibilities.
- Secure project administration.
- Improved accountability.
- Compliance with least-privilege principles.

Conclusion

The successful assignment of roles to **Alice (Project Manager)** establishes the required governance framework for project management operations. By assigning the Project Manager Role along with project and task table permissions, Alice can effectively manage project activities while maintaining secure and controlled access. User impersonation validation confirms that the configured permissions work correctly within the ServiceNow environment.
