

Access Assignment & Governance Enablement

Overview

The Access Assignment & Governance Enablement phase focuses on implementing secure, role-based access control within ServiceNow. This activity ensures that users receive permissions based on their responsibilities. The Team Member (Bob) is assigned restricted access to Task Table 2 while project management functions remain unavailable. User impersonation is used to validate permissions and ensure least-privilege access.

Story: Assign Roles to Bob (Team Member)

Objective

Assign the required role to Bob so he can:

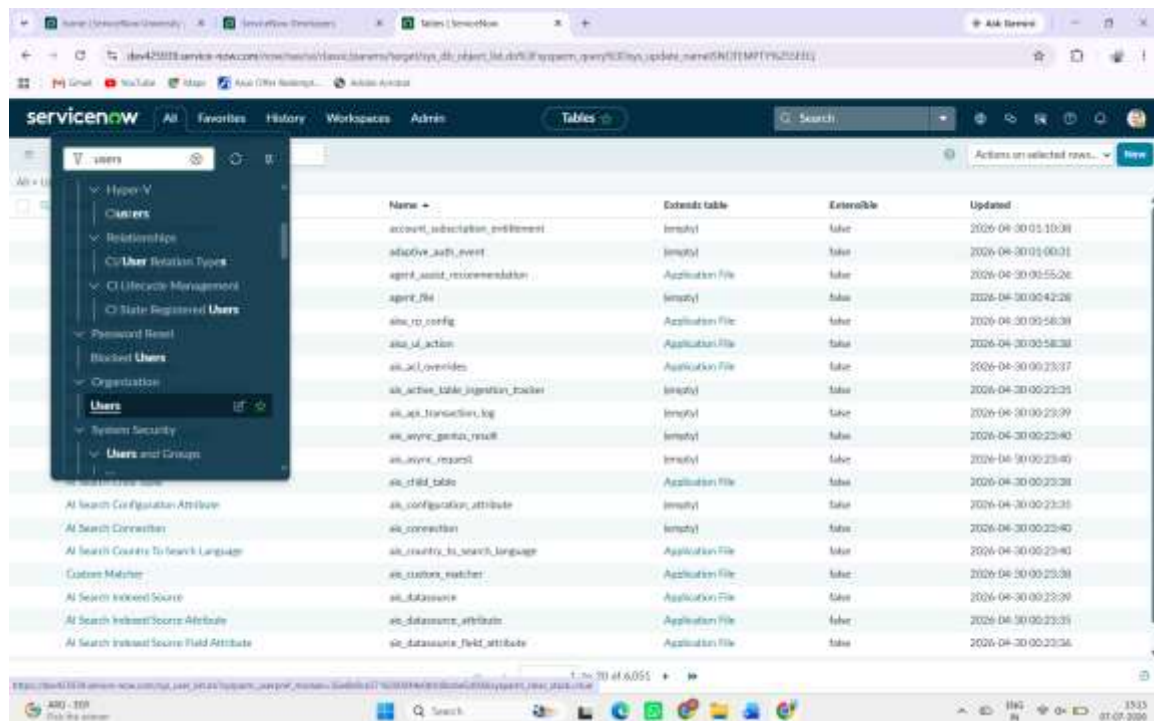

- Access Task Table 2
- View assigned tasks
- Update permitted task information

Bob should not have access to project records or administrative functions.

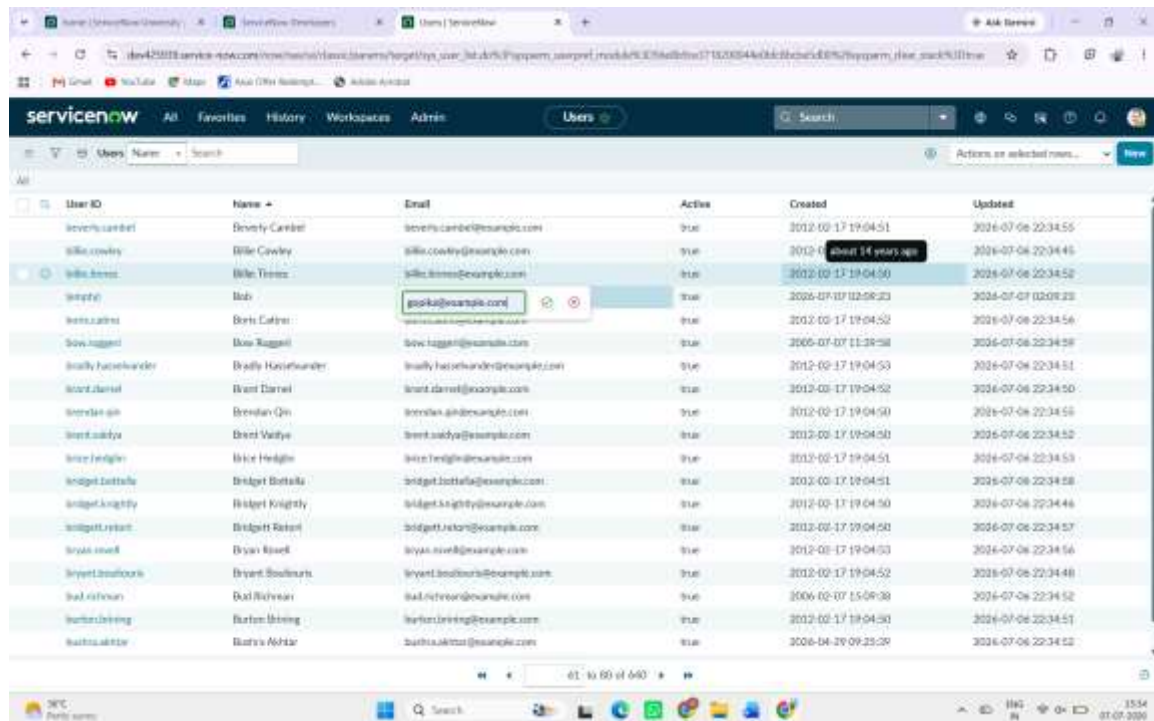

Procedure

Step 1: Navigate to Users

1. Open ServiceNow.
2. Go to All → Search 'Users'.
3. Open User Administration → Users.

Step 2: Open Bob's User Profile
Search for user Bob and open the record.

Step 3: Edit User Roles
Assign Team Member Role and save.

Step 4: Add Table Role

Assign u_task_table role and save.
