

Application Security & Access Enforcement

Overview

This phase ensures application-level security by controlling access to the Project Table and Task Table 2 applications based on user roles. Application visibility in the Application Navigator is restricted through role assignments.

Assign Table Access to Application

Objective

Assign application access roles so only authorized users can view and use the Project Table and Task Table 2 applications.

Procedure

Step 1: Open ServiceNow and search for Project Table in the Application Navigator.

Step 2: Open the Project Table application/module and click Edit Module.

The screenshot displays the ServiceNow Application Menu interface. The top navigation bar includes 'ServiceNow', 'Application Menu', and 'Admin'. A search bar is present. A sidebar on the left shows 'FAVORITES' and 'ALL RESULTS' with a search filter 'application menu'. The main table lists various applications with columns for 'Active', 'Order', 'Roles', 'Name', and 'Updated'. Applications include 'System Diagnostics', 'Incident Mgmt', 'Subscription Management', 'State Management', 'Adaptive Authentication', 'System Web Services', 'Automated Test Framework (ATF)', and 'Continual Search'. A bottom status bar shows '1 to 20 of 174'.

Active	Order	Roles	Name	Updated
True		admin		2015-09-02 06:50:43
True			Orchestrator Application	2016-06-13 14:44:50
True		admin email_account_admin	system_mailbox	2018-08-29 22:19:08
True		admin	Security	2022-08-08 16:47:51
True		sys_admin, admin	system_diagnostics	2025-11-12 17:06:40
True		usage_admin admin		2015-05-27 10:07:48
True		usage_admin		2015-03-16 16:19:40

1 to 20 of 174

Step 3: Assign the Project Member role and save.

Step 4: Search for Task Table 2.

Step 5: Click Edit Application.

The screenshot shows the ServiceNow configuration page for an application menu titled 'project table'. The page includes the following elements:

- Title:** project table
- Application:** Global
- Active:** ☒
- Roles:** A list containing 'project member'.
- Category:** Custom Applications
- Hint:** (Empty text field)
- Description:** (Empty text field)
- Buttons:** Update, Delete

Step 6: Assign both Project Member and Team Member roles.

Step 7: Save the application.

Assigned Application Roles

Application	Assigned Roles
Project Table	Project Member
Task Table 2	Project Member, Team Member

Validation

Impersonate users with different roles and verify that only authorized applications appear in the Application Navigator.

Expected Outcome

- Project Table is visible only to Project Member users.
- Task Table 2 is visible to Project Member and Team Member users.
- Unauthorized users cannot access restricted applications.

Security Benefits

- Application-level access control
- Reduced unauthorized visibility
- Separation of duties
- Least-privilege enforcement

Conclusion

Assigning roles directly to applications enforces secure access, ensuring users can only view and use applications relevant to their responsibilities.
