

Group Management – Creation of Project Team Group

Objective

The objective of this activity is to create a **Project Team Group** in ServiceNow to organize users involved in the project. Groups simplify user management, enable collaborative task assignments, and provide a centralized mechanism for managing permissions and workflows. Alice (Project Manager) and Bob (Team Member) will be added to this group in a later phase.

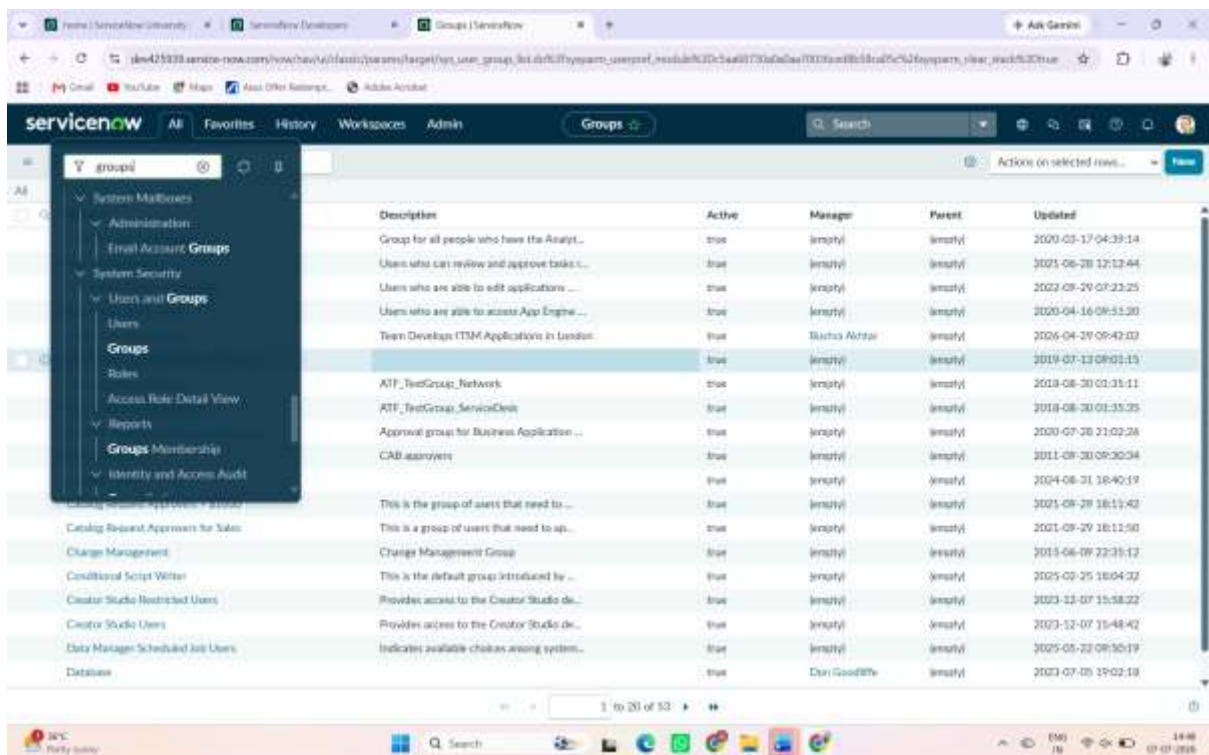

Procedure

Step 1: Navigate to Groups

Open the **Application Navigator** and navigate to:

System Security → Groups

The Groups list page displays all existing groups within the ServiceNow instance.

Step 2: Create a New Group

Click the **New** button to open the Group creation form.

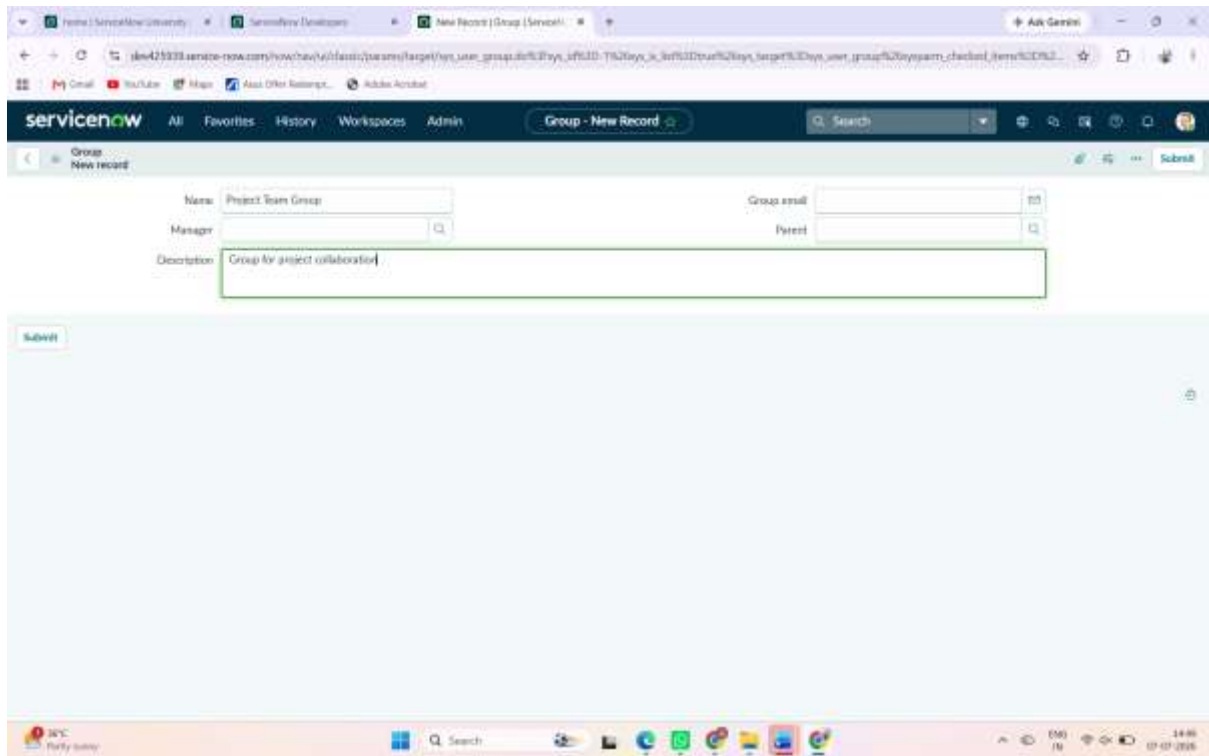

Enter the following information:

Field Value

Name Project Team Group

Description Group for project collaboration

Verify the information and click **Submit** to save the group.

The screenshot shows a web browser window with the ServiceNow interface. The page title is "Group - New Record". The form contains the following fields: "Name" with the value "Project Team Group", "Group email" (empty), "Manager" (empty), "Parent" (empty), and "Description" with the value "Group for project collaboration". A "Submit" button is located at the bottom left of the form. The browser's address bar shows a long URL starting with "u425333.servicenow.com". The Windows taskbar is visible at the bottom of the screen.

Step 3: Verify the Group

After submitting the form, confirm that the **Project Team Group** appears in the Groups list.

The newly created group is now available for adding members and assigning tasks.

Expected Outcome

After completing this activity:

- A new **Project Team Group** is successfully created.
- The group is available for adding project members.
- The group can be used for task assignment and collaboration.
- The foundation for group-based access management is established.

Benefits of Group Management

Creating the **Project Team Group** provides several advantages:

- Organizes project members into a single collaboration group.
- Simplifies task assignment and resource management.
- Supports role-based access control and governance.
- Improves communication and coordination among team members.
- Enhances scalability by allowing additional members to be added easily.

Conclusion

The successful creation of the **Project Team Group** establishes the collaboration framework required for the project. This group serves as a central point for organizing users, assigning project tasks, and managing access within ServiceNow. In the next phase, Alice and Bob will be added as members of this group, enabling efficient teamwork and secure project management.
