

## Creation of Task Table 2

---

### Objective

The objective of this activity is to create a custom **Task Table 2** in ServiceNow to manage and track individual project tasks. This table stores important task-related information such as task name, description, status, comments, and assigned user.

The Task Table 2 provides the foundation for task assignment, progress tracking, workflow automation, and role-based access control. It enables Project Managers to monitor tasks while allowing Team Members to update their assigned work.

---

### Procedure

#### Step 1: Navigate to Tables

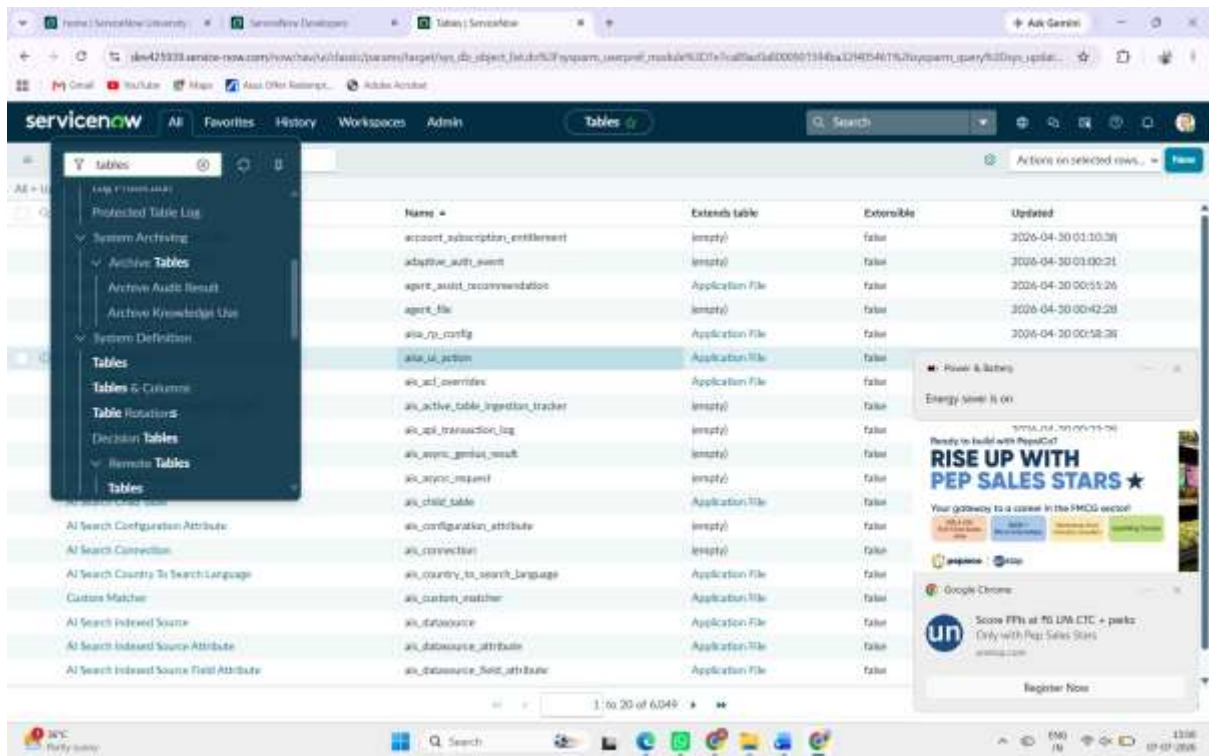

1. Open **ServiceNow**.
2. Select:

**All → Search "Tables"**

3. Navigate to:

**System Definition → Tables**

The Tables module displays all existing tables configured in the ServiceNow instance.

## Step 2: Create a New Task Table

Click the **New** button to create a custom table.

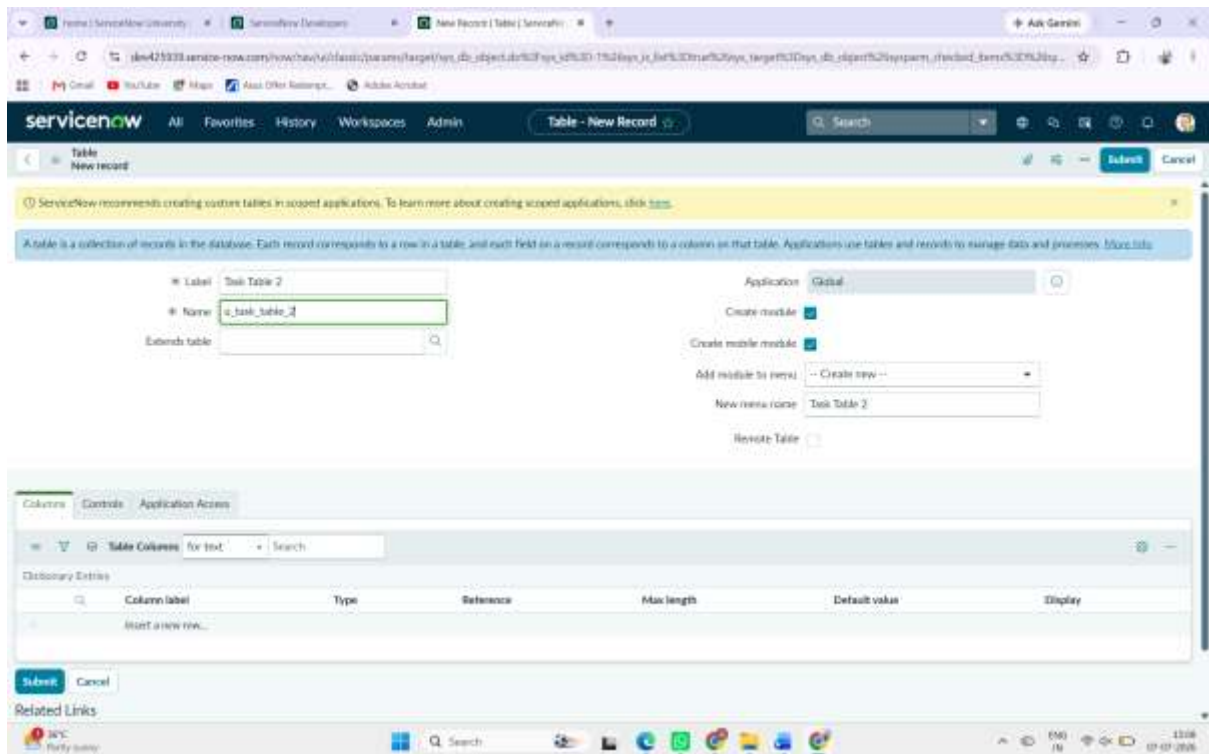

Enter the following details:

### Field Value

Label Task Table 2

Name u\_task\_table2

Click **Submit** after entering the required information.

### Step 3: Add Required Columns

After creating the table, configure the required fields.

The following columns are added:

| Column Name | Field Type       | Description                                             |
|-------------|------------------|---------------------------------------------------------|
| Task Name   | String           | Stores the name/title of the task                       |
| Description | String           | Provides detailed task information                      |
| Status      | Choice           | Tracks task progress (New, In Progress, Completed)      |
| Comments    | String           | Stores additional task-related comments                 |
| Assigned To | Reference (User) | Identifies the user responsible for completing the task |

Additional recommended fields:

| Column Name       | Field Type | Description                 |
|-------------------|------------|-----------------------------|
| Project Reference | Reference  | Links task with a project   |
| Priority          | Choice     | Defines task priority level |

| Column Name | Field Type | Description              |
|-------------|------------|--------------------------|
| Due Date    | Date       | Tracks task deadline     |
| Work Notes  | Journal    | Records progress updates |

#### Step 4: Verify Task Table 2 Creation

After submitting the table configuration:

- Verify that **Task Table 2** appears in the Tables list.
- Confirm that all required columns are available.
- Ensure the table is ready for application modules, ACL configuration, and workflow integration.

#### Expected Outcome

After completing this activity:

- Task Table 2 is successfully created.
- Required task fields are configured.
- Tasks can be assigned to users.
- Task progress can be tracked using status updates.
- The table is ready for workflow automation and access control implementation.

---

#### Benefits of Task Table 2

The Task Table 2 configuration provides:

- Centralized task management.
  - Clear task ownership through the Assigned To field.
  - Transparent progress tracking.
  - Integration support for Flow Designer workflows.
  - Secure task updates through ACL-based permissions.
  - Improved collaboration between Project Managers and Team Members.
-

## Conclusion

The creation of **Task Table 2** completes the task management data structure required for the project. By defining fields such as Task Name, Description, Status, Comments, and Assigned To, the system enables efficient task tracking and accountability. This table will support future implementation of access controls, automated workflows, notifications, and project lifecycle management within ServiceNow.
