

Overview

Stakeholder mapping identifies the individuals and teams involved in the **Optimizing User, Group, and Role Management with Access Control and Workflows** project. Each stakeholder has defined responsibilities that contribute to the successful implementation, testing, and operation of the ServiceNow application. Clearly defining stakeholder roles improves communication, accountability, and project coordination.

1. Project Manager (Alice)

Role: Project Manager

Responsibilities:

- Create and manage project records.
- Assign tasks to team members.
- Monitor task progress and overall project status.
- Review completed tasks and provide approvals.
- Ensure project milestones are achieved within the planned schedule.
- Maintain accountability by tracking task ownership and completion.

Key Contribution:

The Project Manager oversees the entire project lifecycle, ensuring efficient task management, collaboration, and timely project completion.

2. Team Member (Bob)

Role: Team Member

Responsibilities:

- View assigned project tasks.
- Execute assigned work according to project requirements.
- Update task status and progress.
- Add work notes and comments when necessary.
- Mark assigned tasks as completed.

Key Contribution:

The Team Member is responsible for completing assigned tasks and providing accurate progress updates, enabling effective project tracking and transparency.

3. ServiceNow Developers

Role: Application Developers

Responsibilities:

- Configure users, groups, and roles.
- Create and maintain custom Project and Task tables.
- Implement Role-Based Access Control (RBAC).
- Configure Access Control Lists (ACLs).
- Develop and configure workflows using Flow Designer.
- Create application modules and ensure proper system functionality.
- Maintain system security and optimize application performance.

Key Contribution:

ServiceNow Developers design, develop, and configure the application to ensure it meets the project's functional, security, and workflow requirements.

4. QA/Testers

Role: Quality Assurance Team

Responsibilities:

- Test application functionality.
- Validate role-based access permissions.
- Verify Access Control Lists (ACLs).
- Test workflow automation and notifications.
- Identify and report defects.
- Ensure the application meets business and security requirements before deployment.

Key Contribution:

QA/Testers ensure that the application is reliable, secure, and functions correctly by validating workflows, access controls, and overall system behavior.

Stakeholder Summary

Stakeholder	Role	Primary Responsibilities
Alice	Project Manager	Creates projects, assigns tasks, monitors progress, approves completed work, and manages project execution.
Bob	Team Member	Executes assigned tasks, updates task status, adds work notes, and completes assigned activities.
ServiceNow Developers	Application Development Team	Configure users, groups, roles, tables, ACLs, application modules, and automated workflows.
QA/Testers	Quality Assurance Team	Validate workflows, test ACLs and role-based access, identify defects, and ensure application quality.
