

Workflow Execution Testing

Overview

The **Workflow Execution Testing** phase verifies that the automated workflow created in **Flow Designer** executes successfully and performs the configured actions. When the workflow conditions are satisfied, the task status is automatically updated to **Completed**, and an approval request is generated for the **Project Manager (Alice)**.

This activity validates the complete workflow by confirming the task status update, checking the approval request in **My Approvals**, and approving the request to complete the workflow execution.

Story: Workflow Execution Testing

Objective

The objective of this activity is to validate that the **Task Table** workflow executes correctly by:

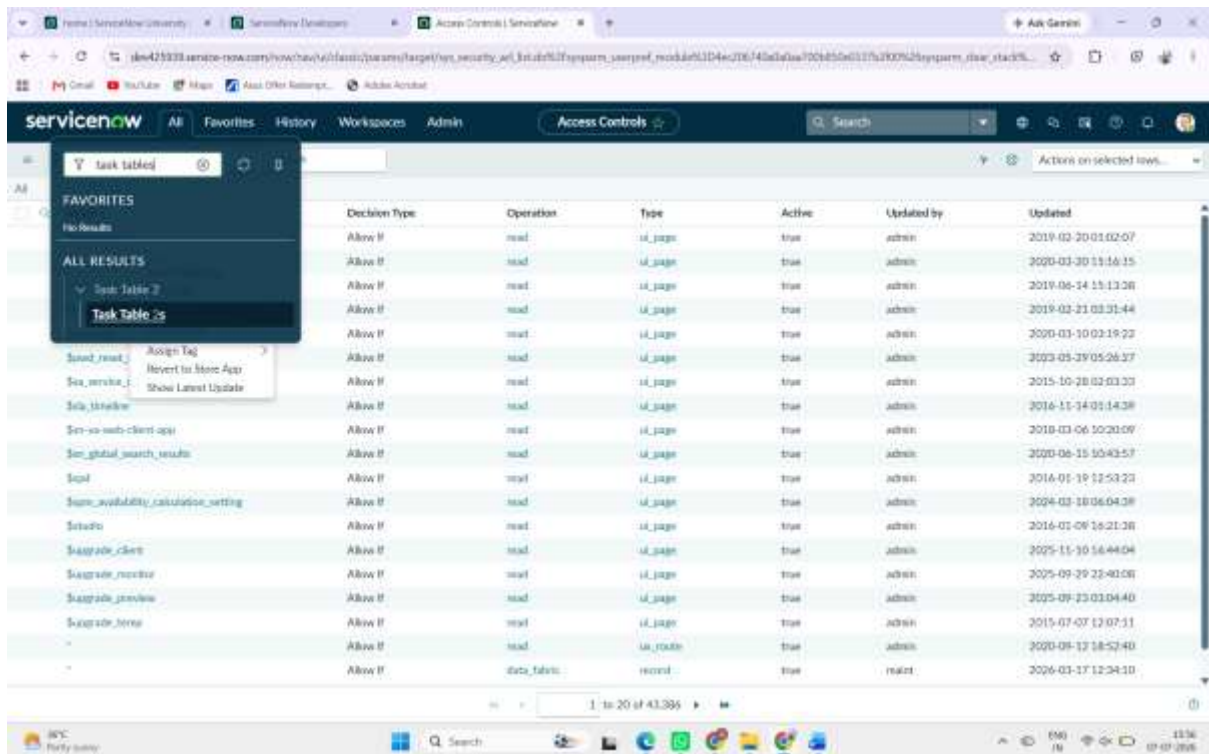

- Automatically updating the task status
 - Generating an approval request
 - Routing the request to the Project Manager (Alice)
 - Completing the workflow after approval
-

Procedure

Step 1: Open Task Table

1. Open **ServiceNow**.
2. Navigate to:

All → Search "Task Table"

3. Open the **Task Table** application.
4. Select the task record that triggered the workflow.

Step 2: Verify Task Status

After the workflow executes, verify that:

Field Expected Value

Status Completed

Confirm that the **Status** field has been automatically updated to **Completed**.

Step 3: Open My Approvals

1. Navigate to:

All → Search "My Approvals"

2. Select **My Approvals** under the **Service Desk** application.

The approval requests assigned to the logged-in user are displayed.

Step 4: Verify Approval Request

Locate the approval request generated by the workflow.

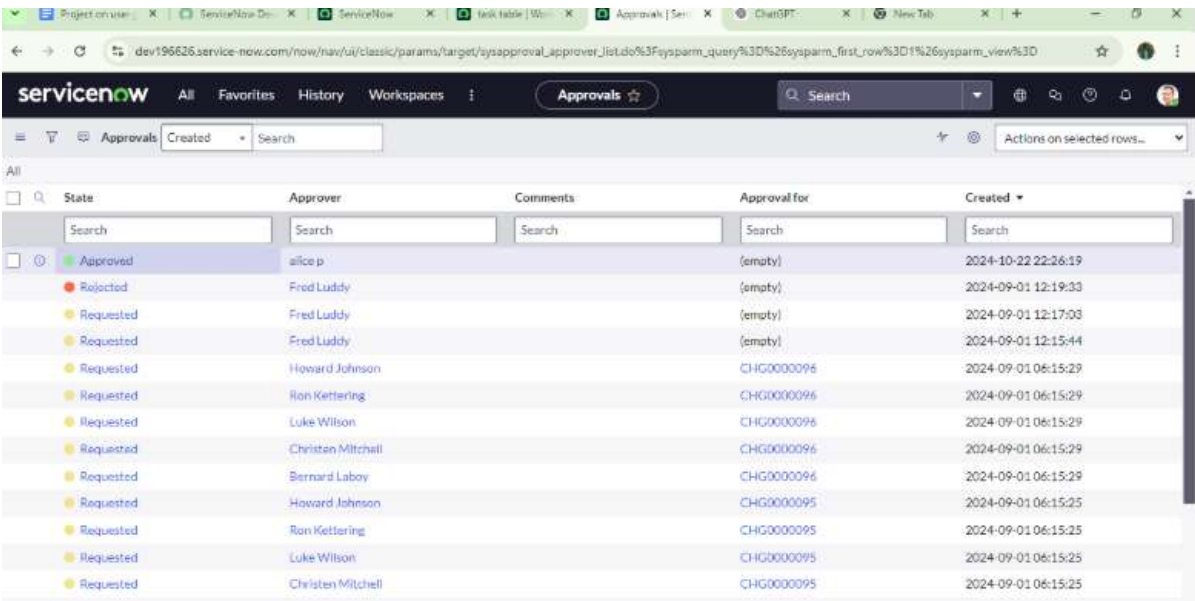

Confirm that:

- The approval request has been assigned to **Alice (Project Manager)**.
- The task information is displayed correctly.
- The approval state is **Requested**.

Step 5: Approve the Request

1. Right-click the **Requested** approval record.
2. Select **Approved**.
3. Save the record if required.

The workflow continues to completion.

Workflow Validation

After completing the testing process, verify the following:

Validation Item	Expected Result
-----------------	-----------------

Workflow Trigger	Executed Successfully
------------------	-----------------------

Task Status	Completed
-------------	-----------

Validation Item Expected Result

Approval Request Generated

Approver Alice (Project Manager)

Approval Status Approved

Workflow State Completed

Expected Outcome

After completing this activity:

-  The workflow executes successfully.
 -  The task status is automatically updated to **Completed**.
 -  An approval request is created.
 -  Alice receives the approval request.
 -  The request is approved successfully.
 -  The workflow completes without errors.
-

Security and Business Benefits

Workflow execution testing provides:

- Automated task completion
 - Standardized approval process
 - Improved project governance
 - Reduced manual intervention
 - Faster approval routing
 - Enhanced workflow reliability
 - Better accountability and audit tracking
-

Conclusion

The successful execution and validation of the **Task Table** workflow confirm that the Flow Designer automation functions as intended. The workflow automatically updates the task status, routes an approval request to the **Project Manager (Alice)**, and completes the business process after approval. This implementation improves operational efficiency, strengthens governance, and ensures consistent task processing within the ServiceNow environment.
